One1

Uncomplicated Modernization and Cloud Deployment with Uniface Maintains ERP Leader's Advantage

Business Challenges

One1 is Israel's leading ERP software supplier, and one of the country's top three IT companies. Publicly listed on the Israeli Stock Exchange, it employs more than 2,500 people. As well as producing software, both packaged and custom-written, One1 provides a complete range of computing services, including infrastructure and advanced storage facilities. It has 1,500+ clients across a variety of industries, including telecom, high-tech, banking and finance, insurance and retail.

One1's ERP clients demand highly customized solutions specific to their business-critical areas. And in a dynamic economy, business needs change frequently. Development and enhancement therefore need to be quick, cost-effective and accurate; this is true both for the core product and for client-specific additions.

In addition, One1 must take advantage of new technologies, such as Cloud, to ensure it always delivers services as flexibly and cost-effectively as possible. As well as the best available functionality and infrastructure, users expect an up-to-date look and feel from their solution, coupled with the ability to use the latest devices, including mobile ones. Ease of modernization is therefore a must for One1.

In an ordinary development environment, it would be hard to reconcile all of these requirements. For example, modernization of the user interface could require a complete rewrite, and then there would be lengthy delays while each client's customizations were reapplied to the new version. So clients need to choose – either the benefits of a tailored solution, or the ease of maintenance that comes with using a package – but not both. <

“Uniface is the core of our ERP system. Because of this we are able to modernize fast and migrate smoothly to platforms such as Cloud and mobile, even with heavy customization.”

Oded Shahar, Vice President, Infrastructure & Integration, One1

Challenge

In a fast-moving market, One1's ERP solution needs to keep up with technological advances like Cloud and mobile. However, its clients also demand heavily customized solutions. It needs a highly productive development environment, and one that enables modernization without significant rework

Results

- Rapid migration to new platforms such as Cloud, without recoding
- Trouble-free modernization, in particular of user interface, even for heavily-customized systems
- Outstanding developer productivity, with customization realized in days, not months or years
- Clients get the benefits of a package combined with a tailored solution
- Over 6,000 customized deployed programs developed in Uniface

Enterprise Application Development

Uniface Benefits
